CLAIMS

What is claimed is:

1. A polymer-type humidity sensor comprising:

a polymer structure of a predetermined shape, wherein said polymer structure comprises a natural rubber and carbon; and

a pair of electric terminals contacting said polymer structure.

- 2. The polymer-type humidity sensor of claim 1, wherein the carbon added to said polymer structure is in a range of 15-20% \pm 5% volume.
- 3. The polymer-type humidity sensor of claim 1, wherein the polymer-type humidity sensor has a resistance in a range of 500 k Ω 2 M Ω .
- 4. The polymer-type humidity sensor of claim 1, wherein the polymer-type humidity sensor has an impedance of $2x10^6 \Omega$ and $5x10^5 \Omega$ at a relative humidity range of 0% and 100% and undergoes impedance change as a function of relative humidity over the whole relative humidity range.
- 5. The polymer-type humidity sensor of claim 1, wherein the natural rubber is NBR-Acrylic-Nitric Butadiene rubber.
- 6. The polymer-type humidity sensor of claim 5, wherein the carbon added to said polymer structure is in a range of 15-20% \pm 5% by volume of said polymer structure.
- 7. The polymer-type humidity sensor of claim 6, wherein the polymer-type humidity sensor has a resistance in a range of 500 k Ω 2 M Ω .
- 8. The polymer-type humidity sensor of claim 7, wherein the polymer-type humidity sensor has an impedance of $2x10^6 \Omega$ and $5x10^5 \Omega$ at a relative humidity range of 0% and 100% and undergoes an impedance change as a function of relative humidity over the whole relative humidity range.
 - 9. The polymer-type humidity sensor of claim 8, wherein said electric terminals are

situated within said polymer structure at predetermined locations and extend outward from said polymer structure.

- 10. The polymer-type humidity sensor of claim 8, wherein said electric terminals are situated externally and contact outer portions of said polymer structure.
- 11. The polymer-type humidity sensor of claim 8, wherein the predetermined shape includes a planar surface to contact a gas having humidity.
- 12. The polymer-type humidity sensor of claim 8, wherein the predetermined shape includes a rounded surface to contact a gas having humidity.
- 13. The polymer-type humidity sensor of claim 12, wherein the predetermined shape is a cylindrical shape having said electrical terminals at opposing ends.
- 14. The polymer-type humidity sensor of claim 12, wherein the predetermined shape is a coil shape having said electrical terminals at edges of the coil shape.
- 15. A polymer structure to act as a sensing structure of a polymer-type humidity sensor, comprising:

a natural rubber; and carbon mixed in said rubber.

- 16. The polymer structure of claim 15, wherein the natural rubber is NBR-Acrylic-Nitric Butadiene rubber.
- 17. The polymer structure of claim 16, wherein an amount of said carbon added to the polymer structure is in a range of 15-20% \pm 5% by volume of the polymer structure.
- 18. The polymer structure of claim 17, wherein the polymer-type humidity sensor has a resistance in a range of 500 k Ω 2 M Ω .
- 19. The polymer structure of claim 18, wherein the polymer-type humidity sensor has an impedance of $2x10^6 \Omega$ and $5x10^5 \Omega$ at a relative humidity range of 0% and 100% and

undergoes an impedance change as a function of relative humidity over the whole relative humidity range.

- 20. A microwave oven to cook food comprising:
- a body including a cooking cavity;
- a heating element to cook the food in the cooking cavity;
- an air outlet unit to discharge air from the cooking cavity;
- a control unit which controls the cooking of the food; and
- a polymer-type humidity sensor disposed at said air outlet to obtain information on a humidity content of the discharged air for use by said control unit, wherein said polymer-type humidity sensor comprises
- a polymer structure of a predetermined shape and having a natural rubber and carbon, and
 - a pair of electric terminals contacting the polymer structure.
- 21. The microwave oven of claim 20, further comprising a cooling fan which draws atmospheric air into the cooking cavity while cooling said heating element.
- 22. The microwave oven of claim 20, wherein an amount of said carbon added to the polymer structure is in a range of 15-20% \pm 5% by volume of the polymer structure.
- 23. The microwave oven of claim 22, wherein the polymer-type humidity sensor has a resistance in a range of 500 k Ω 2 M Ω .
- 24. The microwave oven of claim 23, wherein the polymer-type humidity sensor has an impedance of $2x10^6 \Omega$ and $5x10^5 \Omega$ at a relative humidity range of 0% and 100% and undergoes an impedance change as a function of relative humidity over the whole relative humidity range.
- 25. The microwave oven of claim 24, wherein the natural rubber is NBR-Acrylic-Nitric Butadiene rubber.
 - 26. A polymer type-humidity sensor comprising: a polymer structure having opposing ends, wherein said polymer structure comprises a

rubber and carbon; and

electric terminals, each contacting a corresponding one of the opposing ends of said polymer structure.

- 27. The polymer type-humidity sensor of claim 26, wherein said polymer structure is a cylindrical shape having said electrical terminals at the opposing ends of the cylindrical shape.
- 28. The polymer type-humidity sensor of claim 26, wherein said polymer structure comprises a prismatic shape having said electrical terminals at the opposing ends of the prismatic shape.
- 29. The polymer type-humidity sensor of claim 28, wherein the prismatic shape has a rectangular cross-section.
